Stock Market Trading with LSTM Analysis

Franklin Doane
dept. of Computer Science
Tennessee Technological University
Cookeville, United States
fgdoane42@tntech.edu

METHODS

A. Dataset Creation

1) Get list of stocks by market cap
2) Generate stock list
3) Download data
4) Store data in csv files

B. Training

1) Load and unpack config
2) Load dataset
   a) Open dataset thread pool
   b) Load csv files
   c) Calculate indicators
   d) Create date feature
   e) Slice into training examples
   f) Normalize examples
   g) Create tensor input
3) Create model
   a) Dynamically load model class
   b) Init model
   c) Set optimizer
   d)

C. Evaluation
